#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 07 March 2005.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.

Claims 1-21 are pending in this application.

Applicant's claims are drawn to an agglomerate NPK fertilizer comprising bacteria and methods of making them.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combined teachings of Burnham (US 6,841,515), Burnham et al (US 5,853,450), and Kimura (US 5,093,262).

Burnham teaches the production of biosolid granules for use as fertilizers (abstract).

Burnham et al teach the utility of incorporating wastewater or bioorganic sludges including microbial matter in fertilizer compositions.

Kimura teaches methods of incorporating nitrogen fixing bacillus material into dried fertilizer compositions containing conventional NPK fertilizer materials (column 6).

One of ordinary skill in the art would be motivated to combine these references because they teach the utility of combining microbial materials into fertilizer compositions.

Thus it would have been *prima facie* obvious to the ordinary artisan at the time the invention was made to have made a granular fertilizer composition comprising a bacterial fermentation product because the prior art teaches solid fertilizer compositions comprising known NPK fertilizer components in combination with bacterial materials.

No unobvious or unexpected results are noted; no claim is allowed.
